Reactive: The fetal heart rate goes up at least twice or more during the testing period.This is a normal result, indicating the baby is healthy. Non-reactive: The fetal heart rate does not change when the baby moves.The provider may take steps to stimulate the baby and perform the NST test again, or they may order additional tests.

NST in Pregnancy: What is a Fetal Non-Stress Test?

The heart is a muscular organ in most animals, which pumps blood through the blood vessels of the circulatory system. The pumped blood carries oxygen and nutrients to the body, while carrying metabolic waste such as carbon dioxide to the lungs. In humans, the heart is approximately the size of a closed fist and is located between the lungs, in the middle compartment of the chest.

Heart - Wikipedia

Baseline rate of the fetal heart. The baseline rate is the average heart rate of the fetus within a 10-minute window. Look at the CTG and assess what the average heart rate has been over the last 10 minutes, ignoring any accelerations or decelerations. A normal fetal heart rate is between 110-160 bpm.
