by the Understanding Evolution team A mutation is a change in DNA, the hereditary material of life. An organism's DNA affects how it looks, how it behaves, and its physiology. So a change in an organism's DNA can cause changes in all aspects of its life. Mutations are essential to evolution; they are the raw material

DNA and Mutations - Understanding Evolution

I. INTRODUCTION. People often view genetic information about themselves as private. Each person's genome, or full complement of DNA, is unique, 1 but the specific variants within an individual's genome may be widely shared with biological relatives or even across the entire human population. This mixed character of the genome—as a uniquely individual assemblage of widely shared common ...

The law of genetic privacy: applications, implications, and limitations

Sanfilippo syndrome, also known as mucopolysaccharidosis type III (MPS III), is a rare autosomal recessive lysosomal storage disease that primarily affects the brain and spinal cord.It is caused by a buildup of large sugar molecules called glycosaminoglycans (AKA GAGs, or mucopolysaccharides) in the body's lysosomes,. Affected children generally do not show any signs or symptoms at birth ...
