CSF samples had been collected in the course of medical care of 0- to 3-mo-old febrile infants (n = 913) and subsequently archived at -70 °C. We identified a subset of CSF samples from individuals later diagnosed with ASD, matched them 1:2 with appropriate controls (n = 33 total), and quantified their AVP and oxytocin (OXT) concentrations.

OBJECTIVES: To determine age-specific reference values and quantify age-related changes for cerebrospinal fluid (CSF) white blood cell (WBC) counts and protein and glucose concentrations in infants ≤ 60 days of age. METHODS: This multicenter, cross-sectional study included infants ≤ 60 days old with CSF cultures and complete CSF profiles obtained within 24 hours of presentation.

Cerebrospinal Fluid Reference Values for Young Infants ...

CSF samples were frozen immediately and stored at -68°C, coded, and assayed by a member of the research team (M.J.O.) who was blind to diagnosis and subject identity. CSF concentrations of CRF were measured in duplicate by modification of a previously described specific radioimmunoassay for CRF (19), by using an antiserum (oC33) raised in ...

Elevated CSF Corticotropin-Releasing Factor Concentrations ...

Objective: Paraneoplastic neurological syndromes (PNS) probably result from an immune reaction against antigens shared by the nervous system and tumour cells. To characterise CSF alterations in these syndromes, we studied a large series of paraneoplastic patients. Methods: Using the PNS European database which includes patients diagnosed with PNS in Europe, we reviewed the clinical data of all ...

Redmond, Washington Obituaries | Legacy.com

SUMMARY: CSF-venous fistula is a recently reported cause of spontaneous intracranial hypotension that may occur in the absence of myelographic evidence of CSF leak. Information about this entity is currently very limited, but it is of potential importance given the large percentage of cases of spontaneous intracranial hypotension associated with negative myelography findings.

The "Hyperdense Paraspinal Vein" Sign: A Marker of CSF ...

Microglia are the primary immune cells of the brain whose phenotype largely depends on their surrounding micro-environment. Microglia respond to a multitude of soluble molecules produced by a variety of brain cells. Macrophage colony-stimulating factor (M-CSF) is a cytokine found in the brain whose receptor is expressed by microglia. Previous studies suggest a critical role for M-CSF in brain ...

AGs are CSF-filled meningotheelial-lined protrusions that extend into the venous sinuses through openings in the dura. These structures filter CSF across a lining of arachnoid cells and drain it into central venous circulation. 1,2 Dural venous sinus AGs typically range from 2 to 8 mm. 3 -8 Occasionally AGs can exceed 1 cm in diameter. It is important to distinguish these benign "giant ...

"Giant" Arachnoid Granulations Just Like CSF?: NOT ...

Granulocyte colony-stimulating factor (G-CSF) and granulocyte-macrophage colony-stimulating factor (GM-CSF) enhance the antimicrobial functions of mature neutrophils. G-CSF differs from GM-CSF in its specificity of action on developing and mature neutrophils, its effects on neutrophil kinetics, and its toxicity profile.

Granulocyte Colony-Stimulating Factor and Granulocyte ...

Cerebrospinal fluid (CSF) is a clear, colorless body fluid found in the brain and spinal cord. It is produced by specialised ependymal cells in the choroid plexuses of the ventricles of the brain, and
