Arabidopsis (rockcress) is a genus in the family Brassicaceae. They are small flowering plants related to cabbage and mustard. This genus is of great interest since it contains thale cress (*Arabidopsis thaliana*), one of the model organisms used for studying plant biology and the first plant to have its entire genome sequenced. Changes in thale cress are easily observed, making it a very useful ...

Interspecific hybridization of rapeseed is an important way to innovate breeding resources. This research used *Brassica napus* and *Brassica rapa* for artificial synthesis interspecific hybridization of F1. The F1 self-fruitletting rate was particularly low. By comparing the fertilization rate and seed setting rate of nine crosses and selfing combinations of interspecific hybrid progeny F1 and ...
